

The team behind the team

Case Study - Northampton Saints RFC

When the Saints' network suffered a catastrophic failure, acs stepped in to resolve the problem and to match the club's state of the art stadium and facilities with new cutting edge technology. Impressed with acs's people and skills, the Saints invited acs to become their Official Technology Partner.

After the system failure, the priority was to get the Saints back up and running as quickly as possible. By taking ownership of the problem, the acs team was able to recover lost information and provide a stable, secure network environment.

A review of the entire infrastructure followed, with new servers, storage and backup solutions installed - all with the help of acs's in-house cabling division to ensure a hassle free upgrade. In the near future, acs will be working with Netgear to deliver a wireless stadium and ticketless access to improve the supporter experience.

acs is delighted to be the Official Technology Partner to the Saints - a winning team who share the acs values: passion, loyalty, hard work and a sense of fun and enjoyment.

"The fast pace of technology can be rather daunting but acs has made our transition to a modern way of working much easier. We are all excited about the ways acs can benefit our coaches, guests and supporters."

Brian Facer, Marketing Manager

Working in partnership with the Northampton Saints

- > Driving costs down through co-sourcing
- > Delivering competitive advantage
- > Using technology to benefit staff & supporters

sharing the value of partnership
